Senior Frontend Developer

Frontend Developer with 7+ years of experience building and maintaining web applications using Angular and TypeScript. I have an experience of developing responsive and interactive user interfaces, creating reusable components, improving application performance, and ensuring compatibility across different browsers and devices.

I have also worked with technologies such as NGRX for state management, Angular SSR for server-side rendering, and PWA capabilities to enhance the overall user experience.

In addition to frontend development, I have basic working knowledge of Node.js, Express.js, and MongoDB, which helps me collaborate effectively with backend teams and understand end-to-end application workflows.

I actively use AI-assisted development tools such as Cursor and Antigravity, along with AI models like ChatGPT, Claude, and Gemini, to support tasks such as code generation, debugging, documentation, and exploring implementation approaches, enabling faster and more efficient development.

Experience

Sr. Frontend Developer

April 2019 - Present

Softrefine Technology

Ahmedabad, Gujarat

- Developed and maintained enterprise-scale web applications using Angular and TypeScript with extensive REST API integration.
- Designed reusable and modular UI components to improve maintainability, consistency, and development efficiency across projects.
- Built highly interactive user interfaces using Angular Material, Kendo UI, Ngx-Bootstrap, AgGrid, and Mapbox.
- Collaborated closely with cross-functional teams, stakeholders, and end users to gather requirements and deliver new features aligned with business goals.
- Implemented state management solutions and optimized application performance to enhance user experience.
- Contributed to backend development activities by creating and maintaining server-side scripts using Node.js and Express.js.
- Developed and maintained unit test cases using Jasmine and Karma to ensure application reliability and improve code quality.
- Created and executed end-to-end test scenarios using Cypress to validate critical user workflows and enhance overall application stability.
- Participated in code reviews and followed frontend best practices to maintain high development standards.
- Worked extensively with Git-based workflows and project management tools including Azure DevOps, Bitbucket, GitLab, Jira, and Trello.
- Developed responsive, cross-browser compatible applications with strong focus on accessibility, maintainability, and modern frontend standards.

Frontend Developer

Nov 2018 – Mar 2019

iCorethink Technologies

Ahmedabad, Gujarat

- Developed and maintained Angular-based administrative applications to streamline organizational processes and operations.

- Converted UI/UX designs into responsive, standards-compliant web pages using HTML, CSS, and Angular.
- Implemented client-side form validations and authentication-related functionalities, including login and registration workflows.
- Optimized application performance and ensured compatibility across multiple browsers and devices.
- Collaborated with team members to troubleshoot issues, enhance existing features, and deliver quality releases within project timelines.

Web Developer Intern

WebAgilent

Jan 2018 – Oct 2018

Nadiad, Gujarat

- Created a responsive web page using HTML, CSS, and JavaScript.
- Participated in implementing user interface components and integrating frontend functionality based on project requirements.
- Gained hands-on experience with web development best practices, version control workflows, and collaborative development processes.
- Supported the team in maintaining and updating existing web applications while learning modern frontend development concepts.

Education

Government Engineering College Modasa (GTU)

Bachelor of Engineering in Information Technology

Enrolled: June 2013 | Completed: June 2017

Overall CGPA: **7.10** / 10.00

Projects

Watering

Angular 16 | Kendo UI | Mapbox GL JS | Azure

- Architected a geographical monitoring platform for water distribution networks, utilizing Mapbox GL JS within an Angular 20 environment to build highly interactive visualizations of water meters, pipelines, pumps, valves, and sensors.
- Implemented real-time monitoring infrastructure to track critical pressure and flow metrics across network components, leveraging Azure cloud services for data processing and predictive analytics to proactively identify operational inefficiencies within water infrastructure.
- Developed high-performance client-side solutions by integrating C++ functions to run locally hydraulic simulation logic via WebAssembly (Wasm), enabling complex network analysis to execute directly in the browser, which significantly offloaded backend processing and improved application responsiveness.

QuizAcademy

Angular 21 | NgRx | WebSocket | Angular Material | Bitbucket

- Contributed to the development of a comprehensive multilingual educational SaaS platform, enabling instructors to design complex quizzes, exams, and surveys using Angular and Angular Material. Built flexible assessment engines that support both synchronous live event hosting and asynchronous time-controlled exams, complete with automated question-linking logic.
- Implemented scalable state management using NgRx to handle large datasets and complex application states, while integrating WebSockets to enable real-time features like live gamification, dynamic leaderboards, and interactive word clouds.

- Standardized application quality through a rigorous testing strategy, including unit testing for business logic with Jasmine and Karma, alongside end-to-end regression testing with Cypress to validate user workflows. Utilized AI-assisted development tools to implement automated content creation wizards, streamlining the user experience for educators.

Blu Loyalty

Angular 12 | Angular Material | ng-select | Git Submodules

- Engineered and scaled customer engagement and loyalty management applications for multiple business partners within the Blu Loyalty ecosystem using Angular 12.
- Designed a modular, reusable frontend architecture using Git Submodules to manage dependencies efficiently across partner platforms, facilitating centralized management of reward catalogues, promotional campaign engines, and integrated travel service modules while maintaining a consistent and responsive user interface across all instances.

DeporteValenciano

Angular 9 | Angular SSR | Hasura GraphQL | Git

- Developed a high-traffic sports news portal delivering real-time updates and insights for Valencian sports teams, utilizing Angular 9 for the frontend architecture.
- Optimized content delivery and SEO performance by implementing Server-Side Rendering (SSR) with Angular Universal, significantly reducing initial page load times and elevating Google Page Speed metrics, ensuring a seamless high-performance experience.
- Integrated Hasura GraphQL to manage dynamic data fetching, providing efficient, type-safe communication between the frontend and the data layer to support fast-paced content updates.

ImaxWeb CMS Platform

NX | Angular 20 | CMS

- Built a custom CMS Admin Portal enabling content editors to manage pages, layouts, and site configurations through a user-friendly interface, implementing dynamic rendering via configurable JSON-driven templates (e.g., galleries, carousels).
- Developed the public-facing platform using Angular SSR to enhance performance and SEO, optimizing site visibility through dynamic metadata, structured content generation, and search-engine-friendly URLs.
- Engineered a modular, component-based architecture to support rapid website creation and integrated REST APIs to streamline content retrieval, site management, and publishing workflows across multiple instances.

Technical Skills

Languages: JavaScript (ES6+), TypeScript

Frontend: Angular, RxJS, NgRx, Angular Universal (SSR), Progressive Web Apps (PWA), HTML5, CSS3, SCSS

UI Libraries: Angular Material, Kendo UI, AgGrid, Ngx-Bootstrap, ng-select, Mapbox GL JS

Backend (Working Knowledge): Node.js, Express.js, REST API Development, MongoDB, MySQL

Testing: Cypress, Jasmine, Karma, Unit Testing

Version Control & Collaboration: Git, Azure DevOps, Bitbucket, GitLab

Project Management: Jira, Trello

Development Tools: Visual Studio Code, Postman

AI-Assisted Development: Cursor, Antigravity, ChatGPT, Claude, Gemini

Concepts: Component-Based Architecture, Responsive Design, Cross-Browser Compatibility, Performance Optimization, API Integration, Reusable UI Development
